

all you need to know!

Tomo

A self-learning knowledge base to provide you with relevant knowledge quickly and easily.

Knowledge Management

TOMO offers more than 400 options to connect to data sources, reading them out in parallel.

Reading and Comprehending Texts
Using semantic analysis, TOMO recognizes relevant terms in documents.

Social Media Analysis / Trend Analysis

On social media channels, TOMO can independently recognize users' emotions.

This enables companies to respond to customer needs more quickly.

Knowledge Libraries

Many companies have their own technical language. Once established as a library, Tomo categorizes all documents by keywords and links them, delivering relevant internal and external search results.

Unlike other systems, Tomo can access knowledge libraries and Wikipedia in REAL TIME.

Knowledge Storage

Employees can evaluate, weight and assign the available data. That way, relevant connections are not only stored in employees' heads, but also become documented in the system.

And this is how it works:
